Abstract

The Legal mate AI will be an AI-based system, which will help in searching for the legal information and providing the requested company. The legal information in the current system will be derived from the sources, which offer legal information in compliance with Indian law. The concept of understanding the laws, legal information and legal jargons becomes highly complex for the citizens. The current system will be able to understand the request, jargons and also search for the legal information from Indian legal knowledge base using artificial intelligence, NLP, and RAG. One of the key issues, which will need to be considered in order to develop the current project, will be the development of custom Indian legal AI model. The custom Indian legal AI model will be developed using the concept of legal problem solving, legal intent classification and legal Q&A. The current custom legal AI model will be able to explain the legal rights, Acts and sections, analyze the legal documents and generate legal complaints or evidence checklist.
