FOOD LOOP

ABSTRACT

Food wastage and food insecurity exist side by side in many communities, as surplus food from restaurants, events, households, and retailers is often discarded while people nearby go without adequate meals. This paper proposes Food Loop, a platform that connects food donors with recipients and volunteers to redistribute surplus food efficiently and safely before it spoils. Donors can list available food items along with quantity, preparation time, and pickup location, while receiving organizations and volunteers can view nearby listings, request items, and coordinate collection and delivery. The system tracks the status of each donation from listing to delivery, helping ensure transparency and timely handling of perishable items. A web-based dashboard presents active listings, request status, and activity summaries in an accessible format for all users. By closing the loop between surplus food and those in need, the proposed system aims to reduce food waste, improve access to meals, and encourage community participation in sustainable food sharing.
